(54) Title: TEST CONNECTOR FOR IMPLANTABLE LEADS AND ASSOCIATED METHODS

(57) Abstract: Testing connectors for use with implantable leads are disclosed. The testing connectors are suitable for attachment to an implantable medical lead connector to facilitate electrical testing of the implantable lead. In some cases, a distal end of the lead can be repositioned within a body while the lead is electrically connected to a test device. A testing connector comprising the housing having a first side (106) and a second side (108) is disclosed. The first side of the housing defines a first channel and the second side of the housing defines a second channel. The first channel and the second channel are dimensioned to receive at least a portion of an implantable lead.
